DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-11 are, drawn to a method for controlling a gear ratio change in an automatic transmission, classified in class 477, subclass 70.
 - II. Claims 12-21 are, drawn to a system for controlling gear ratio changes, classified in class 74, subclass 335.
2. The inventions are distinct, each from the other because of the following reasons:

Inventions of Groups I and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the apparatus (group II) as claimed can be used to practice another and materially different process, for example, a method for controlling a gear ratio change in an automatic transmission comprising the steps of determining a target gear ratio based on detected operating parameters, changing a current gear ratio to the target gear ratio by controlling friction elements, controlling an engine torque such that an output torque is maintained below a target output torque.
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Art Unit: 3681

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
